E-Mail:

Location, Date:

– subsequently **Licensor** –

in relation to the provision of non-textual material as listed in **Schedule 1**.

TIB provides web-based access to non-textual material to its users (e. g. media with moving and still images, audio media and media with “spoken language”<sup>1</sup> and research data). The non-textual material is made accessible via TIB’s portals, displayed in a manner adapted to the media type, linked to further research information and (if licensed for this purpose) made available for download to users. Individual sequences, trailers or thumbnails are provided as previews.

Non-textual material will be subject to long-term preservation according to TIB’s concept if it is highly relevant for research and teaching and available in an appropriate technical format. If the non-textual material may be viewed online or is made available for download it shall be given an unambiguous identifier (e. g. DOI-name).

TIB develops new or implements known tools for the analysis of multimedia material such as form, speech or structure recognition to create additional content-related and structural metadata that can be of help to a user for his search. For this purpose TIB collects, analyses and archives non-textual material provided to TIB and processes them if necessary (e. g. segmentation, creation of visual abstracts, thumbnails, trailer, audiotranscripts, indexing, converting to other data formats also for the purposes of long-term preservation).

<sup>1</sup> EN ISO 14915-3 Software-Ergonomie für Multimedia-Schnittstellen part 3, pp. 6 ff.

The Licensor grants TIB a non-exclusive right to use the Material listed in Schedule 1 in part or as a whole (e. g. stills, sequences, audio) for the above named purposes, including but not limited to the right to store digital versions, reproduce, adapt and make them publicly available for download or streaming to users via the services of TIB in public datanetworks worldwide, and also publicly perform (also for TIB's own promotional purposes) them free of charge. In addition, TIB may reproduce and distribute the material for above named purposes in all technical, digital and analogue audiovisual systems in all formats and physical forms worldwide and use the material also for hitherto unknown kinds of use.

TIB explicitly points out that the material may be exploited exclusively for the users own use.

TIB may transfer all rights and obligations derived from this contract to other public or private institutions and partners, grant licenses or consent to their use of the material without explicit consent of the Licensor, if this serves to promote the provision of literature on a national or international level and scientific networking, or if other institutions support or permanently take over functions and responsibilities from TIB.

Use of the static preview files and metadata shall be subject to the conditions of the Creative Commons License CC0 1.0 Universal (CC0 1.0) Public Domain Dedication (link to the summary and legally binding version of the license text: <http://creativecommons.org/publicdomain/zero/1.0>).

The Licensor confirms that the described use of the Material and Metadata does not violate rights of third parties (e. g. copyright, rights of performers, personality or publicity rights, data protection). In case the films were produced in collaboration with others, the Licensor confirms that the content of the agreement is known to and approved of by all collaborators. In case claims are brought against TIB on the grounds of violation of third party rights, the Licensor will indemnify TIB, if the Licensor can be held responsible.

The Licensor confirms that the Material does not contain music, for which, if used as described above, the rights must be licensed separately from a collecting society or another institution.

The Licensor will notify TIB immediately in writing, via facsimile or email, if data provided in this document changes.

TIB may extract a logo from the website of the Licensor, adapt it in size if necessary for TIB's portals, and use it to label the non-textual Material of the Licensor within the TIB's portals.

After consignment of a copy of this agreement to TIB containing signature in manuscript, TIB will make the film accessible immediately without further notice.

TIB provides scientific information in all areas of engineering as well as chemistry, information technology, mathematics and physics to the public. If the materials do not satisfy the quality criteria TIB generally applies to scientific information, TIB may exclude the material from its services without prior notice.

TIB cannot be held responsible for change of the data or interruptions within the public data networks or occurring during data transmission.

The Licensor will provide the Material to TIB in electronic form (incl. Metadata and additional Material if applicable) either himself or through the organisation named above.
